

5. Create Register function

+ Add a controller with controller name: **UserController**

+ Code in UserController.cs file

```
public class UserController : Controller
{
    // GET: User
    dbBookStoreDataContext db = new dbBookStoreDataContext();
    [HttpGet]
    public ActionResult Register()
    {
        return View();
    }
    [HttpPost]
    public ActionResult Register(FormCollection collection, customer c)
    {
        var name = collection["customer_name"];
        var username = collection["username"];
        var password = collection["password"];
        var confirmpassword = collection["confirmpassword"];
        var email = collection["email"];
        var address = collection["address"];
        var numberphone = collection["numberphone"];
        var dob = String.Format("{0:MM/dd/yyyy}", collection["dob"]);

        if (String.IsNullOrEmpty(confirmpassword))
        {
            ViewData["enterpassword"] = "Must enter password to confirm!";
        }
        else
        {
            if (!password.Equals(confirmpassword))
            {
                ViewData["samepassword"] = "Password and confirmation password must be the same";
            }
            else
            {
                c.customer_name = name;
                c.username = username;
                c.password = password;
                c.email = email;
                c.address = address;
                c.numberphone = numberphone;
                c.dob = DateTime.Parse(dob);
                db.customers.InsertOnSubmit(c);
                db.SubmitChanges();
                return RedirectToAction("Register");
            }
        }
        return this.Register();
    }
}
```

6. Create Login function

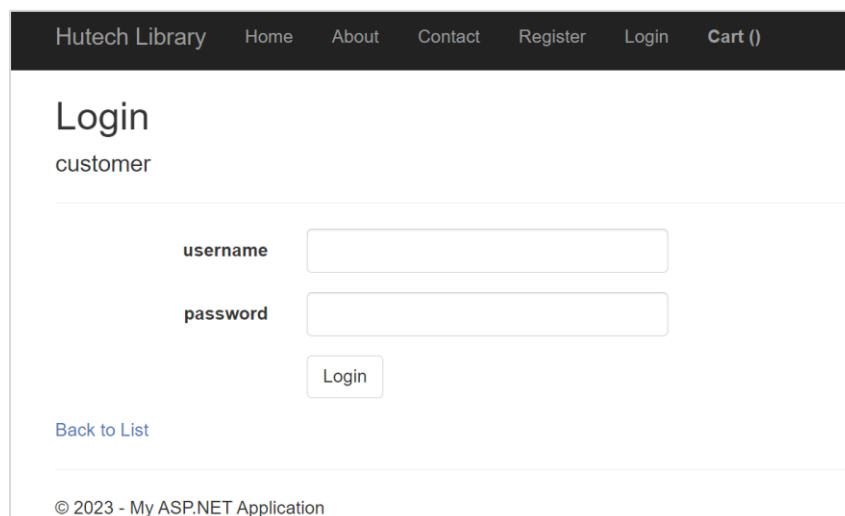

+ Open Models>UserController.cs and add code:

```
[HttpGet]
public ActionResult Login()
{
    return View();
}
[HttpPost]
public ActionResult Login(FormCollection collection)
{
    var username = collection["username "];
    var password = collection["password"];
    customer c = db.customers.SingleOrDefault(n => n.username == username &&
n.password == password);
    if (c != null)
    {
        ViewBag.ThongBao = "Congratulations on successful login";
        Session["User"] = c;
    }
    else
    {
        ViewBag.ThongBao = "Username or password is incorrect";
    }
    return RedirectToAction("Home", "Book");
}
```

+ Add Login view:

+ Login view:

7. Create “Place an order” function

+ Open CartController and add code:

```
[HttpGet]
public ActionResult PlaceOrder()
{
    if (Session["User"] == null || Session["User"].ToString() == "")
    {
        return RedirectToAction("Login", "User");
    }
    if (Session["Cart"] == null)
    {
        return RedirectToAction("Index", "Book");
    }
    List<Cart> lstCart = getCart();

    ViewBag.sumQuantity = sumQuantity();
    ViewBag.Total = Total();
    ViewBag.sumProductQuantity = sumProductQuantity();

    return View(lstCart);
}
public ActionResult PlaceOrder(FormCollection collection)
{
    order dh = new order();
    customer kh = (customer)Session["User"];
    book s = new book();

    List<Cart> gh = getCart();
    var delivery_date= String.Format("{0:MM/dd/yyyy}",collection["delivery_date"]);

    dh.customer_id = kh.customer_id;
    dh.order_date = DateTime.Now;
    dh.delivery_date = DateTime.Parse(delivery_date);
    dh.isship = false;
    dh.ispayment = false;

    db.orders.InsertOnSubmit(dh);
    db.SubmitChanges();

    foreach (var item in gh)
    {
        orderdetail ctdh = new orderdetail();

        ctdh.order_id = dh.order_id;
        ctdh.book_id = item.book_id;
        ctdh.quantity = item.iquantity;
        ctdh.price = (decimal)item.price;

        s = db.books.Single(n => n.book_id == item.book_id);
        s.quantity_instock -= ctdh.quantity;
        db.SubmitChanges();

        db.orderdetails.InsertOnSubmit(ctdh);
    }
    db.SubmitChanges();
    Session["Cart"] = null;
    return RedirectToAction("ConfirmOrder", "Cart");
}
```

+ Add PlaceOrder view:

+ Layout PlaceOrder view: Use layout view of Cart.cshtml + layout of place an order

```
@model IEnumerable<Lab04.Models.Cart>
@{
    ViewBag.Title = "Cart";
    Layout = "~/Views/Shared/_Layout.cshtml";
}
<h2>Your Cart</h2>
<table class="table">
    <tr>
        <th>@Html.DisplayNameFor(model => model.book_name)</th>
        <th>@Html.DisplayNameFor(model => model.image)</th>
        <th>@Html.DisplayNameFor(model => model.price)</th>
        <th>@Html.DisplayNameFor(model => model.iquantity)</th>
        <th>@Html.DisplayNameFor(model => model.Total)</th>
        <th></th>
        <th></th>
    </tr>
    @foreach (var item in Model)
    {
        <tr>
            <td> @Html.DisplayFor(modelItem => item.book_name) </td>
            <td>  </td>
            <td> @using (Html.BeginForm("CartUpdate", "Cart", new { @id = item.book_id }))
            {
                <td> @String.Format("{0:0,0}", item.price) USD </td>
                <td> <input type="number" min="1" name="txtQuantity" value="@item.iquantity"/> </td>
                <td> @Html.DisplayFor(modelItem => item.Total) </td>
                <td>
                    <a href="@Url.Action("Detail", "Book", new{id=item.book_id})"> Detail</a> |
                </td>
                <td>
                    <input type="submit" value="Update" class="btn btn-success" />
                </td>
            }
        </tr>
    }
    <tr style="font-weight:bold; text-align:left; color:red">
        <td colspan="2"> Quantity Sum: @ViewBag.sumProductQuantity </td>
        <td colspan="2"> Quantity Total: @ViewBag.sumQuantity </td>
        <td colspan="4"> Total: @String.Format("{0:0,0}", @ViewBag.Total) USD </td>
    </tr>
    <tr style="font-weight:bold; color:blue; text-align:right ">
        <td colspan="5">
            @Html.ActionLink("Cart Delete", "AllCartDelete")
        </td>
    </tr>
    <tr style="font-weight:bold; color:yellow; text-align:right ">
        <td colspan="5">
            @Html.ActionLink("Back to Cart", "Cart", "Cart")
        </td>
    </tr>
</table>
```

```

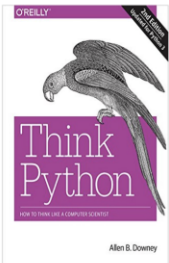

@using Lab04.Models
<h2 style="text-align:center">Information of Place an order</h2>
@{
    customer kh = (customer)Session["User"];
}
<table align="center">
    @using (Html.BeginForm())
    {
        @Html.ValidationSummary(true)
        <tr style="height:40px">
            <td>Customer name: </td>
            <td style="font-weight:bold">@kh.customer_name</td>
        </tr>
        <tr style="height:40px">
            <td>Email: </td>
            <td style="font-weight:bold">@kh.email</td>
        </tr>
        <tr style="height:40px">
            <td>Address: </td>
            <td style="font-weight:bold">@kh.address</td>
        </tr>
        <tr style="height:40px">
            <td>Number phone: </td>
            <td style="font-weight:bold">@kh.numberphone</td>
        </tr>
        <tr style="height:40px">
            <td>Order date: </td>
            <td style="font-weight:bold">@DateTime.Now.ToShortDateString()</td>
